

Anetec® Technical Yarns

For Industrial & Filtration Fabrics

Designed for optimum weaving or knitting performance for specialty applications

Twisted Weaving and knitting yarns constructed of polyester, nylon and many other fibers using both multifilament and monofilament designs. Yarn sizes processed range from .10 mm to .30 mm in monofilament and from 210 denier to 1890 denier in multifilament and are finished in a monocord or twisted construction. In addition, composites are available using both mono/multi combinations as well as blending fiber types to yield desired modulus and stiffness properties.
